| 8. Information exchange to make NNA, | |
| 9. Plan of future work | |
| 10. AOB | |

Additional items for agenda will be discussed in process of final agenda.

Invited:

- Representatives of the SEERC members: AUT, BIH, GRC, HRV, HUN, ITA, MKD, MNE, ROU, SRB, SVN, TUR and UKR.

NOTE: New CENELEC (CLC) standard (EN 50341-1) for design and construction of overhead lines above 1 kV AC from December 2012 obligated countries members of EU and CLC to prepare National Normative Aspects (NNA) reflecting national practices. At the moment in many EU countries national technical commissions work on preparation of NNA as second part of the standard for design and construction of the OHLs. Some countries already submitted NNAs to CLC.

The intention of the regional working group is to support each other based on information how to finalize this work. For the countries, which are not presently the members of the EU or CLC this WG is opportunity to get more information about re-designing standards adapted to climatic changing. The first meeting will be oriented to the exchanging information and ongoing work. Following meeting will go more in details and preparation of RWG report, which will described the main dimensions of the regional practice for NNA.

Convener:
Kresimir BAKIC
